

## PhiChem Materials Acquires a Major Share of Eternal Electronic Materials (Kunshan) Co., Ltd.

Shanghai China — In April 2017, Anqing PhiChem Material Co., Ltd., a wholly-subsiary of Shanghai PhiChem Material Co., Ltd successfully completed acquisition of a 60% share of Eternal Electronic Materials (Kunshan) Co., Ltd. (Eternal Electronic Materials). With this acquisition, PhiChem has significantly enhanced its product portfolio in the electronics materials space.

Eternal Electronic Materials was founded in Kunshan, Jiangsu in 1996, by Eternal Corporation, to manufacture and market high-quality epoxy molding compounds (EMC) for semiconductor device and integrated circuit (IC) packaging. The EMC compounds are manufactured in a variety of grades, including standard, low-stress and high-thermal conductivity products.

By adding EMC materials to its product portfolio, PhiChem will be able to leverage its relationship with its current customers to expand the strong sales that Eternal has previously established in this market space. Furthermore, PhiChem will also combine its own research & development resources with that of the newly acquired subsidiary, to introduce new and improved materials into the semiconductor packaging industry.
